PITCH DECK · MADE TO MOVE

PASSPORT PAY

Give your agent money. Not the power to drain it.

PITCH STEP 01 / 04

THE SOLUTION

The rules live in the agent's smart account.

- Agents pay APIs over x402, each with a ZK passport credential, one per agent, anti-Sybil by nullifier.
- Every payment is checked: payee, cap, revocation.
- A hijacked agent can sign. Stellar still says no.

Why it wins: it works even when the agent itself is compromised.

PITCH STEP 02 / 04

PMF

Agents with wallets ship now. Injection is the risk.

- Owners: babysit every payment, or trust a bypassable cap.
- Sellers: no free tier for agents without bot farms.
- Stellar: x402 and MPP are live; bounded authority is missing.

Why care: one injected page can drain an agent's wallet. Ours lost zero.

PITCH STEP 03 / 04

WORKFLOW

Prove. Bind. Enforce. Official x402 facilitator.

- Prove: ZK passport in the browser, verified on BN254.
- Bind: the factory deploys the agent's account in one tx.
- Enforce: __check_auth on every USDC transfer.

Why it works: live on testnet, 62 contract tests, public demo.
